

InsDel2a / 2b / 2c per-sample share by Major Cancer Type and stratum
Each sample appears in exactly one stratum. Hypermutator cutoff = 5000 total indels. Black bar = median.

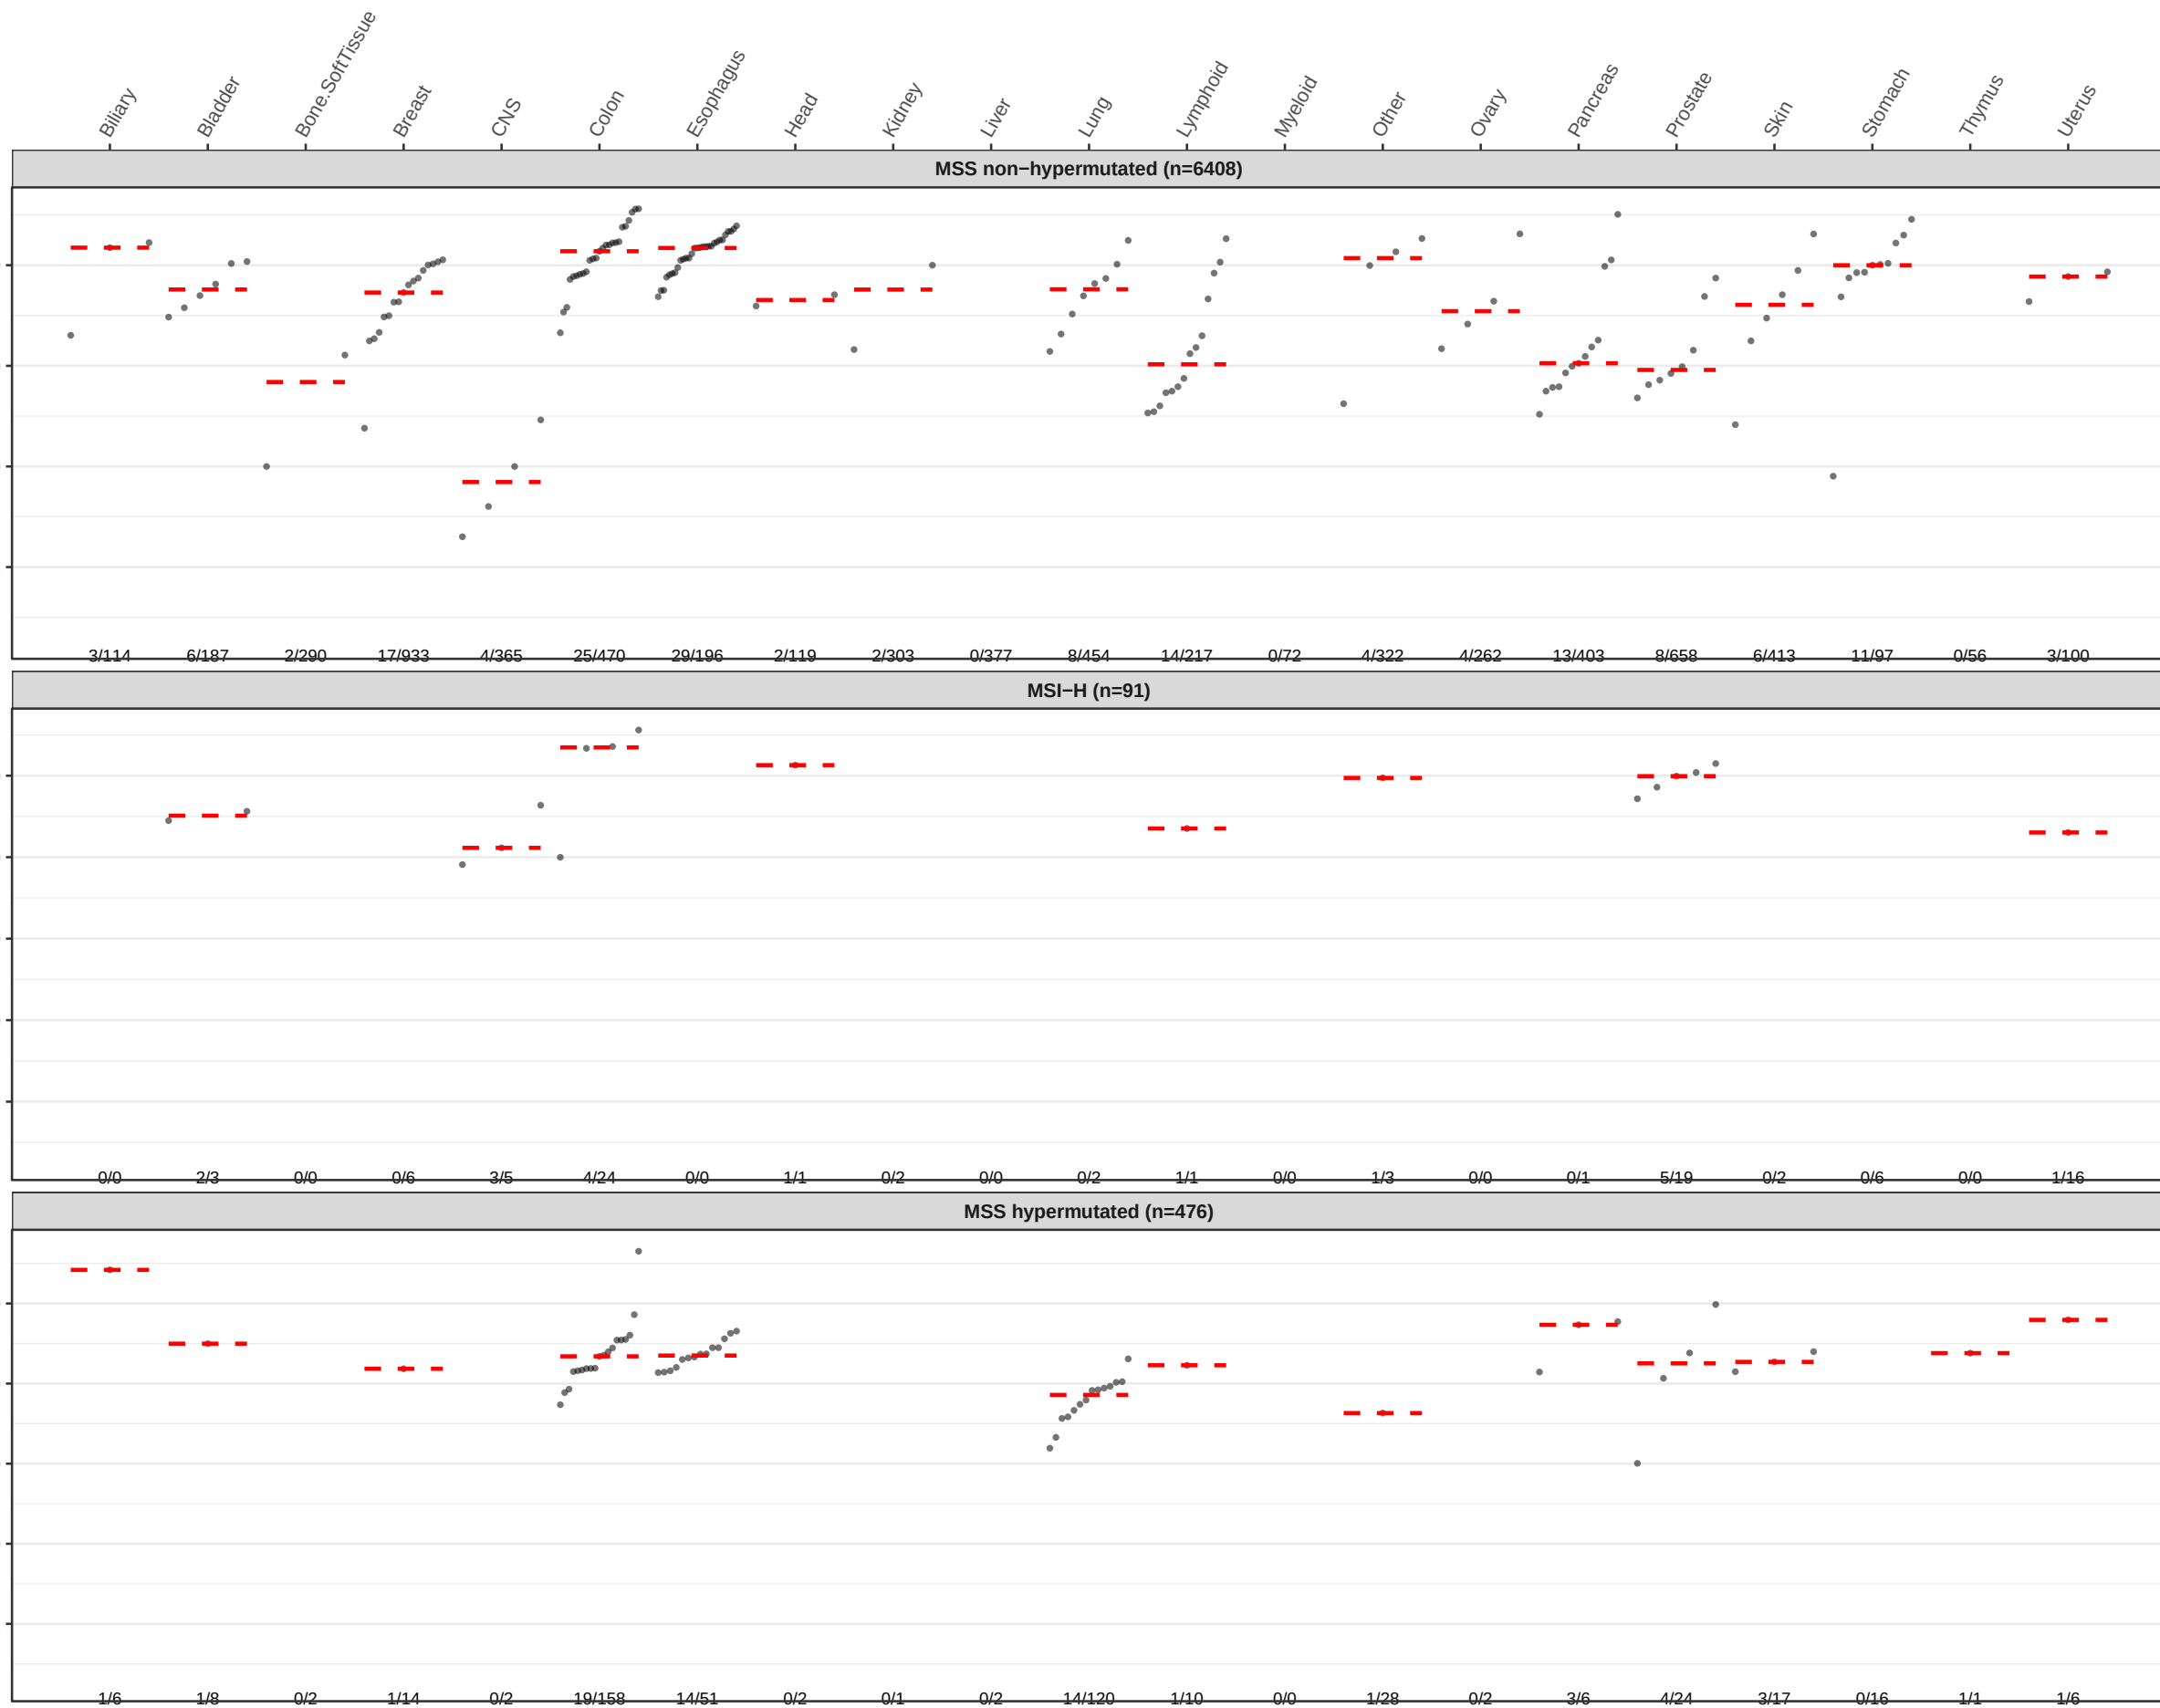

Signature share of sample's assigned indels

C_ID2/InsDel2a mutations attributed per sample

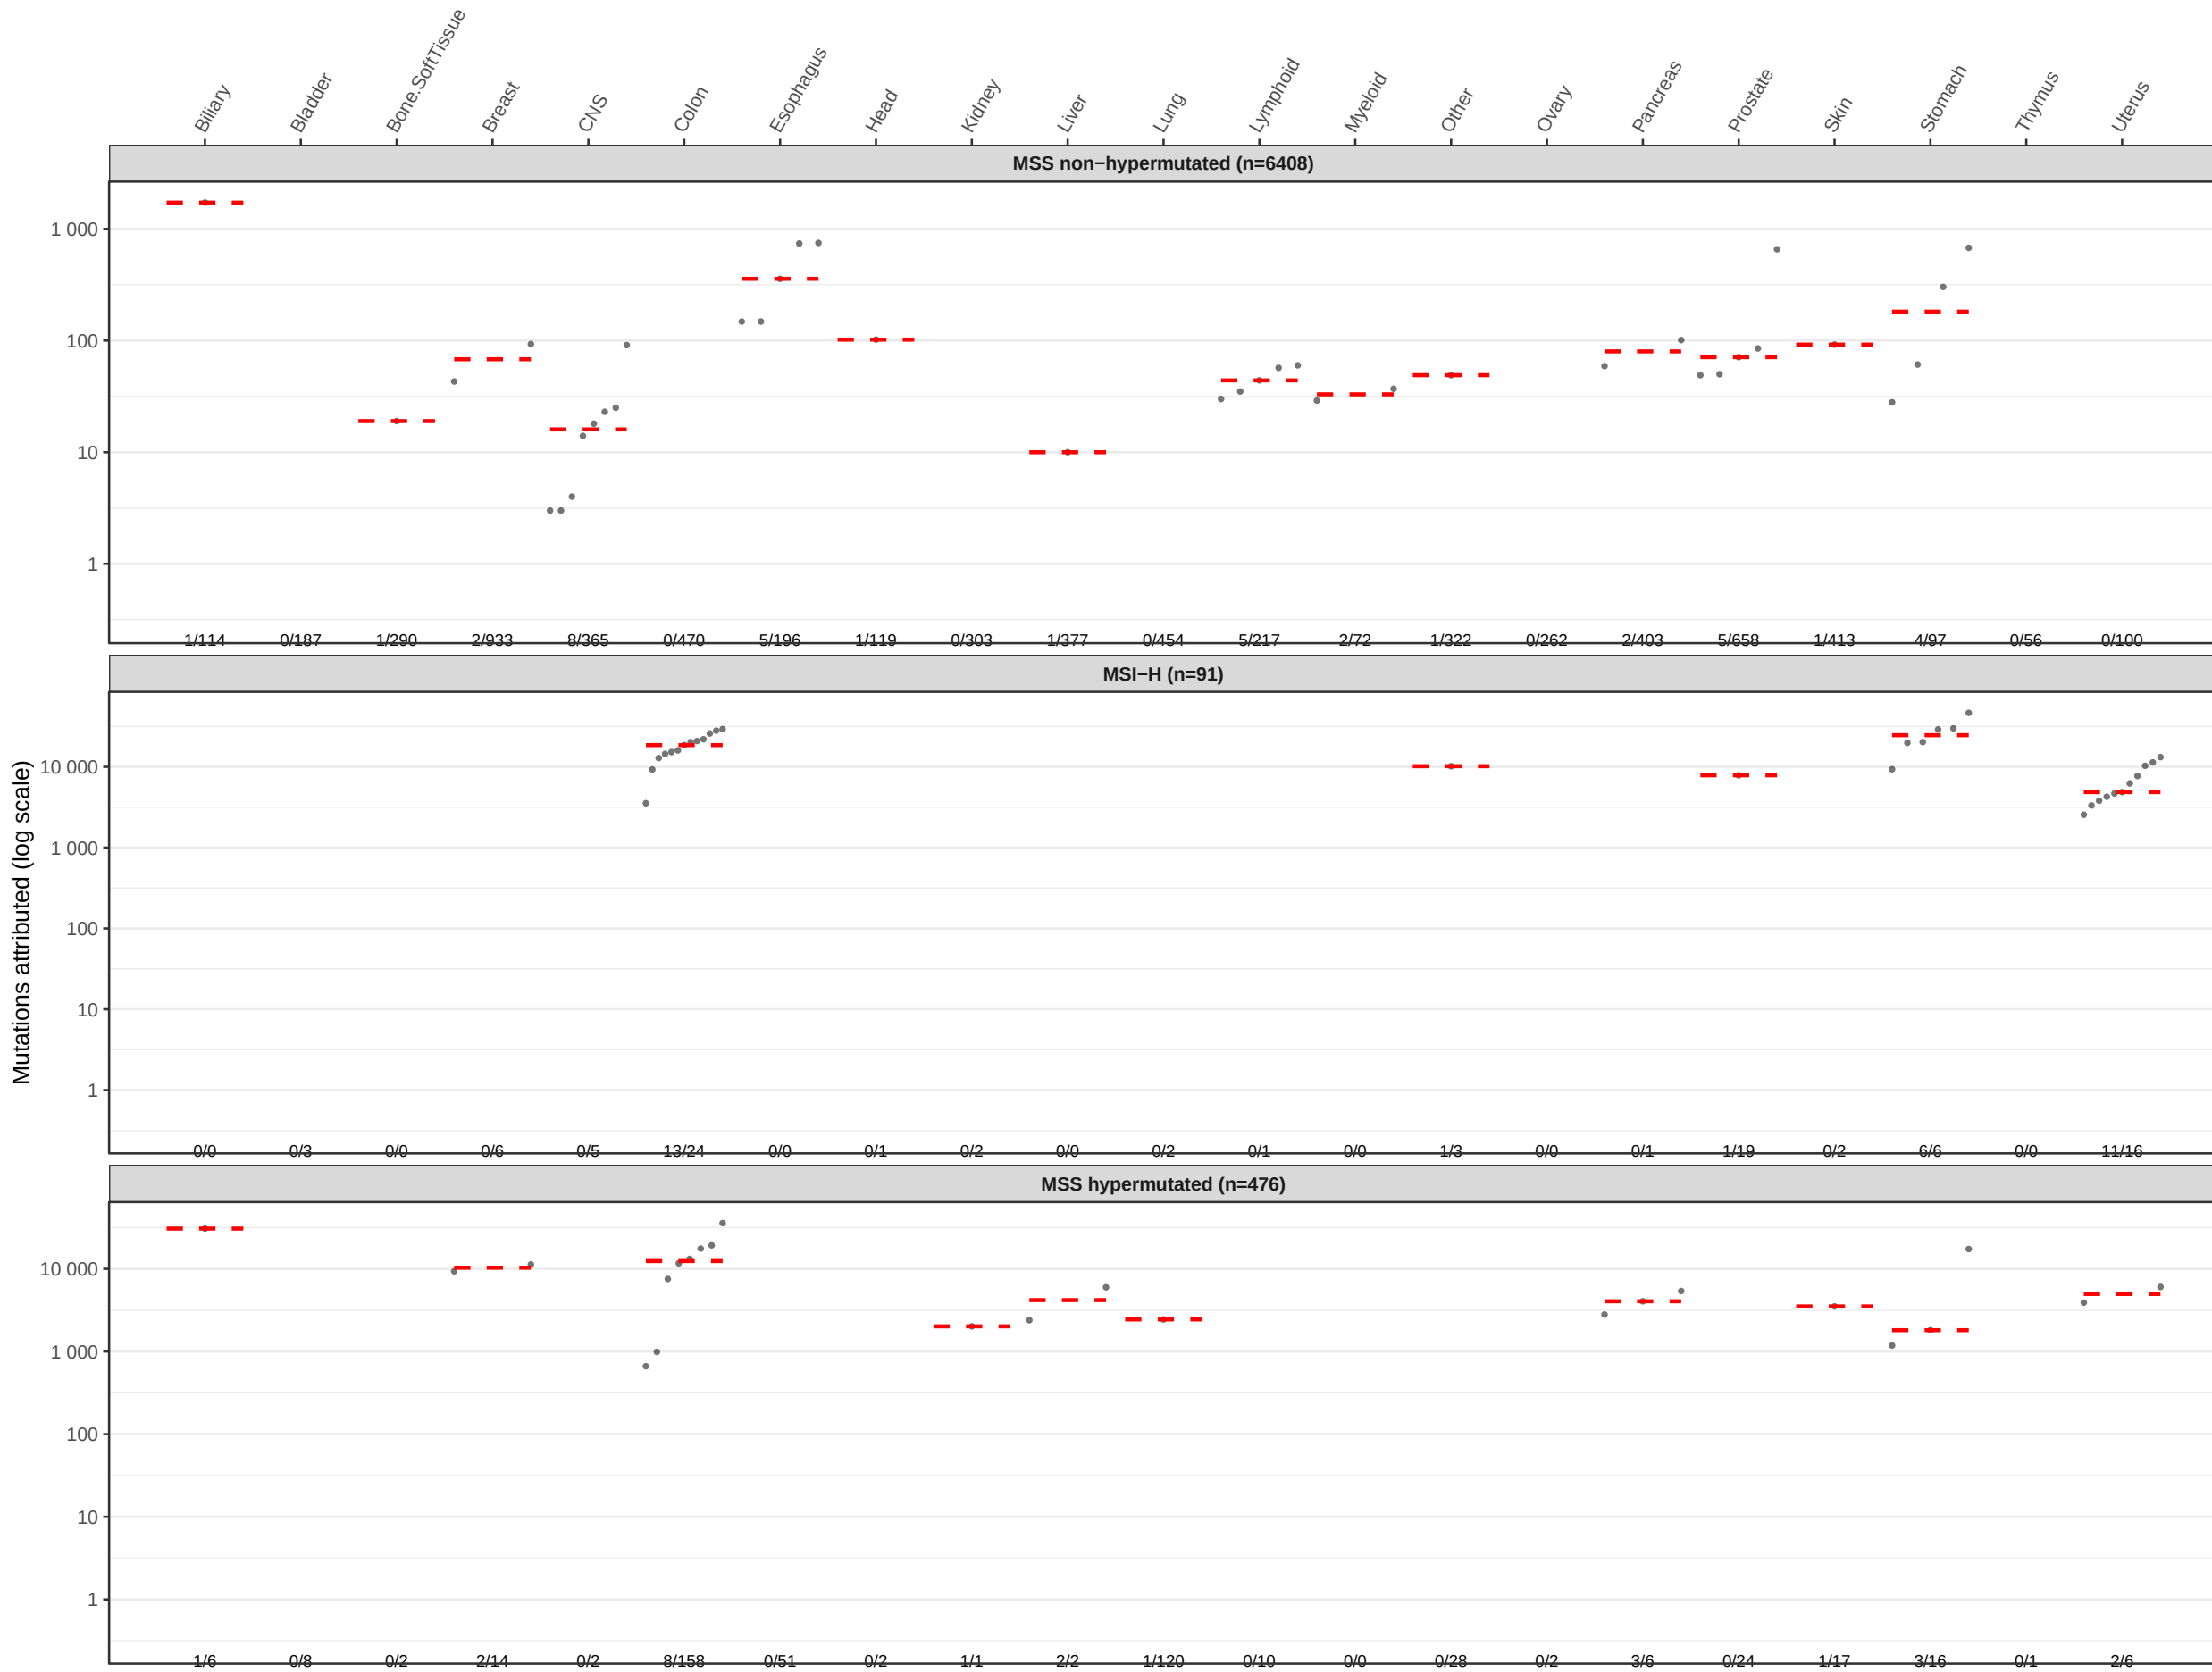

Each dot = a sample. Red dashed line = per-type median over nonzero samples. Counts beneath bars: nonzero / total samples in that stratum.

Mutations attributed (log scale)

C_ID2/InsDel2b mutations attributed per sample

Each dot = a sample. Red dashed line = per-type median over nonzero samples. Counts beneath bars: nonzero / total samples in that stratum.

C_ID2/InsDel2c mutations attributed per sample

Each dot = a sample. Red dashed line = per-type median over nonzero samples. Counts beneath bars: nonzero / total samples in that stratum.
